

NOTES

Track Assembly Steps

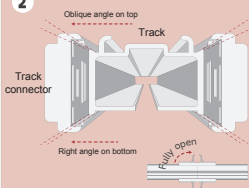

1

Connecting two tracks

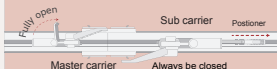

Ensure that the marker lines on both track pieces are perfectly aligned before proceeding with the splice.

2

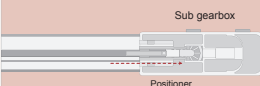

When connecting the tracks, ensure that the connector buckles are fully opened to a 90 degree angle.

3

Open the master carrier, and keep the sub carrier closed at all times. Only pull the positioner after the track assembly.

4

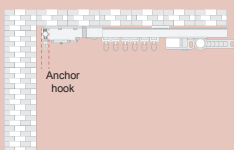

Put on the sub gearbox, then pull the positioner to the sub gearbox until you hear a "click" sound.

5

Push the two carriers to two track ends, then lock the buckle of the master carrier.

6

Hang up the anchor hook before mounting the track to the ceiling.

7

DO NOT mount the motor before completing the track assembly.

8

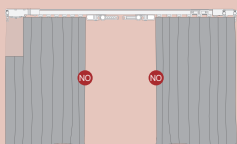

If you want to adjust the track (length or position), please detach the motor from the track first.

NOTES

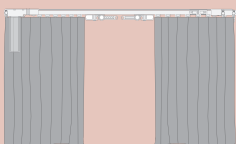

Use of Curtain Motor

1

DO NOT pull the curtain manually before mounting the motor.

2

DO NOT pull the curtain too fast or too hard manually. A slight pull will trigger the automatic opening/closing.
